

AMENDMENT TO THE SPECIFICATION:

An Amended specification is filed herewith as Appendix B. The Amendments address the Examiner's objections concerning clarity of explanation of the invention and a series of antecedent base notations (see discussion in the appropriate section of REMARKS, below) . Specifically, on page 7 line 12 which originally was typed " the other end of the pump resonant cavity 105 is slightly reflective at the pump wavelength." omits necessary punctuation and 105 identifies the reflector element at one of the two pump cavity ends. The line should read: "The other end 105, of the pump resonant cavity is slightly reflective at the pump wavelength....". The correction appears in the amended specification filed herewith at page 7 line 19. As the Examiner correctly notes, the end of the cavity is a reflector identified as element 105. The cavity itself has now been labeled "B" in Fig 1 in the corrected drawings submitted herewith.

Additional, minor amendment to the specification appear on pages . The complete, amended specification is attached as Appendix B hereto.
